### **ELECTION/RESTRICTION**

## Response to Appeal Brief

In view of the Appeal Brief filed on 7/15/2004, PROSECUTION IS HEREBY REOPENED. A restriction requirement, which will be followed by a new, non-final rejection, is set forth below.

Based on the applicant's arguments in the appeal brief, it is clear to the examiner that the claims are indefinite with regard to the overlap between monomer structures in the claimed segments of the various polymers present in the application and that prosecution of the application should be reopened to clarify these structures in the claims. As the claims include structures with different features, which are patentably distinct, as noted below, restriction of the claims including elections of species for the different segments and formulae are required for a thorough examination.

#### Restriction

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions, which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-16 and 37, drawn to a material for a solid polyelectrolyte and a solid polyelectrolyte membrane.

Art Unit: 1745

Group II, claim(s) 17-21 and 41, drawn to a multi-segmented fluoropolymer having a first segment containing sulfuric acid functional groups and a second segment containing no sulfuric acid functional groups.

Group III, claim(s) 22-29 and 42-44, drawn to a multi-segmented fluoropolymer having a first segment containing sulfuric acid functional groups and a second segment containing sulfuric acid functional groups.

Group IV, claim(s) 30-36 and 38-40, drawn to a material for a solid polyelectrolyte and a solid polyelectrolyte membrane, each having a multi-segmented, block copolymer, fluoropolymer.

The inventions listed as Groups I and IV do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

All of the groupings are directed to a multi-segmented fluoropolymer but each group has a special technical feature not shared by the remaining groups.

Group I is directed to material for a solid polyelectrolyte and a solid polyelectrolyte membrane which has the special technical feature of a multi-segmented fluoropolymer having a first segment of formula (1) containing sulfuric acid functional groups copolymerized with a unit having no sulfonic acid groups, and a second segment B containing no sulfuric acid functional groups, having a crystalline melting point of 100C or higher or a glass transition temperature point of 100 C or higher.

Group II is directed a multi-segmented fluoropolymer which has the special technical feature of a multi-segmented fluoropolymer having a first segment containing sulfuric acid functional groups which is a copolymer having a molecular weight of 5,000-750,000 and a unit having no sulfonic acid groups, and a second segment B containing no sulfuric acid functional groups, having a molecular weight of 3,000-12,000,000.

Group III is directed a multi-segmented fluoropolymer which has the special technical feature of a multi-segmented fluoropolymer having both a first segment containing sulfuric acid functional groups and a second segment B containing sulfuric acid functional groups.

Group IV is directed to *material for a solid polyelectrolyte and a solid polyelectrolyte membrane* which has the special technical feature of a <u>block</u> copolymer having at least two types of fluoropolymer chain segments at least one chain segment containing sulfuric acid functional groups.

Art Unit: 1745

This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1. For the group selected in the restriction requirement there are more than one species of the generic invention.

The species are as follows:

In Group I, formula (1) shown in claims 1 and 11 includes a combination of elements in the monomer molecule. Specifically, n can be 0 or 1. This is combined with Rf, which is C1-C40 or C1-C40 having an ether bond and offers combinations of the four different species. The applicant should elect one of the combination species. In claim 6, the concentration of each material, tetrafluoroethylene and Formula (3), includes no amount or, 0 mol. %, of Formula 3. The applicant should elect the species with Formula (3) or with no amount or, 0 mol. %, of Formula (3).

In Group II, formula (1) shown in claims 17 and 41 includes a combination of elements in the monomer molecule. Specifically, n can be 0 or 1. This is combined with Rf, which is C1-C40 or C1-C40 having an ether bond and offers combinations of the four different species. The applicant should elect one of the combination species. In claim 18, the identity of Rf, is C1-C40 or C1-C40 having an ether bond. The applicant should elect one of the species. In claim 21, the concentration of each material, tetrafluoroethylene and Formula (3), includes no amount or, 0 mol. %, of Formula 3. The applicant should elect the species with Formula (3) or with no amount or, 0 mol. %, of Formula (3).

Art Unit: 1745

In Group III, formula (1) shown in claims 22 and 42 includes a combination of elements in the monomer molecule. Specifically, n can be 0 or 1. This is combined with Rf, which is C1-C40 or C1-C40 having an ether bond and offers combinations of the four different species. The applicant should elect one of the combination species. In claims 23 and 26, the identity of Rf, is C1-C40 or C1-C40 having an ether bond. The applicant should elect one of the species.

In Group IV, formula (1) shown in claim 33 includes a combination of elements in the monomer molecule. Specifically, n can be 0 or 1. This is combined with Rf, which is C1-C40 or C1-C40 having an ether bond and offers combinations of the four different species. The applicant should elect one of the combination species. In claim 35, the identity of Rf, is C1-C40 or C1-C40 having an ether bond. The applicant should elect one of the species.

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

The claims are deemed to correspond to the species listed above in the following manner:

Art Unit: 1745

Group I, claim(s) 1-16 and 37.

Group II, claim(s) 17-21 and 41.

Group III, claim(s) 22-29 and 42-44.

Group IV, claim(s) 30-36 and 38-40.

The following claim(s) are generic: None.

The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons: Pursuant to PCT Rule 13.2 and PCT Administrative Instructions, Annex B, Part 1(f)(I)(B)(2), the species are not recognized equivalents.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

# **Examiner Correspondence**

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Mark Ruthkosky whose telephone number is 571-272-1291. The

examiner can normally be reached on FLEX schedule (generally, Monday-Thursday from 9:00-6:30.) If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Patrick Ryan can be reached at 571-272-1292. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
